

dB Acoustics Pty Ltd

ACN 005 864 022

# Vent Silencers

Vent silencers are designed specifically to reduce noise exertion issues with Safety venting systems. Such equipment as Steam Safety valves, vents, compressed air systems, Industrial gas systems and steam dumping systems can be treated.

The silencers are custom designed to suit your specific requirements and dB Acoustics can size and provide technical information to aid you in your design and selection.

Standard construction is from heavy wall boiler plate but this can be substituted for higher grade metals such as stainless steel if the silencers are to be installed within a corrosive environment.

Because of their robust construction dB Acoustics Vent silencers can be hot dip galvanized to provide a long lasting surface finish. Other surface treatments include: High temperature metal spray and paints.

For further advise on these products please contact dB Acoustics Pty Ltd.
